

Please amend the above-identified application as follows:

**IN THE CLAIMS**

In accordance with 37 C.F.R. § 1.121, please substitute the following clean copy text for the pending claims of the same number:

- 
- 1           1.     (Twice Amended) A method for remote control of a testing device  
2     connected to a device under test, the method comprising the steps of:  
3           connecting the device under test to the testing device;  
4           connecting a remote controlling device to the testing device;  
5           connecting a communication link to the remote controlling device;  
6     directing a video camera on the testing device connections to the device under test;  
7           establishing a connection between said remote controlling device to a remote  
8     controller on said communication link;  
9           transmitting device under test data to said remote controller;  
10          controlling said testing device using input from said remote controller;  
11          establishing a model of the testing device by electronically obtaining model  
12     information from the device under test and the testing device; and  
13          transmitting an image of the testing device connections and the model  
14     information to the remote controller for analysis.
-

1           7.     (Twice Amended) A remote controlling apparatus for remote control of  
2     a testing device connected to a device under test, said remote controlling apparatus  
3     comprising:  
4           a connection interface between said testing device and said remote controlling  
5     apparatus;  
6           a first programmable logic for controlling the testing device and the device under  
7     test;  
8           a video camera to provide video images of the testing device and the device  
9     under test;  
10          a modem to transmit the video images across a network to a remote controller;  
11          a third programmable logic to establish a model of the testing device by  
12     electronically obtaining model information from the device under test and the testing  
13     device; and  
14          a transceiver for transmitting an image of the testing device connections and the  
15     model information to the remote controller for analysis.

1            11.    (Twice Amended) A remote controlling apparatus for remote control of  
2    a testing device connected to a device under test, said remote controlling apparatus  
3    comprising:  
4            means for connecting a remote controlling device to the testing device;  
5            means for connecting a communication link to the remote controlling device;  
6    means for directing a video camera on the testing device connections to the device under  
7    test;  
8            means for establishing a connection between said remote controlling device to a  
9    remote controller on said communication link;  
10           means for transmitting device under test data to said remote controller;  
11           means for controlling said testing device by said remote controller;  
12           means for establishing a model of the testing device by electronically obtaining  
13    model information from the device under test and the testing device; and  
14           means for transmitting an image of the testing device connections and the model  
15    information to the remote controller for analysis.
